# Valve Station in stainless steel

## ICF SS 20 and ICF SS 25

Based on advanced technology the ICF SS valve station incorporates several functions in one housing, which can replace a series of conventional mechanical, electro-mechanical and electronically operated valves.

This valve station not only provides a number of advantages in the design phase of a refrigeration plant but also in the installation, service and maintenance.

The ICF SS valve stations are designed for low and high pressure refrigerants and can be used in pumped liquid lines, liquid injection lines and hot gas lines.

Supplied as a complete assembly, it is fully tested at high pressure and its functions are tested under factory controlled conditions.

One code number equals one application solution.

**Features**

- Designed for industrial refrigeration applications for a maximum working pressure of 52 bar / 754 psig.
- Applicable to HCFC, non flammable HFC, R711 (Ammonia) and R744 (CO<sub>2</sub>). The use of ICF SS valve stations with flammable hydrocarbons is not recommended.
- Direct weld connections (No leaks through flanges).
- Stainless steel valve housing and function modules.
- Low weight and compact design.

- V-port regulating cones on the control modules ensure optimum regulating accuracy particularly at part load.
- Modular Concept Each housing is available with butt-weld DIN connections in several sizes. Valve service is performed by replacing the function module.
- Side ports for the connection of pressure gauges, transmitters, sight glasses, service valve etc.
- UL approved

### Technical data

- **Refrigerants**

Applicable to HCFC, non flammable HFC, R717 (Ammonia) and R744 (CO<sub>2</sub>).

The use of ICF SS valve stations with flammable hydrocarbons is not recommended.

For further information please contact the local Danfoss sales company.

- **Temperature range**

-60 – 120 °C / -76 – 248 °F.

If the ICM module is going to be used in liquid refrigerant with a temperature above 75 °C / 167 °F, please contact Danfoss.

- Ambient temperature for ICF SS with ICAD:  
-30 – 50 °C / -22 – 122 °F

- **Pressure**

The ICF SS is designed for:

Max. working pressure: 52 bar g / 754 psig

*Opening differential pressure:*

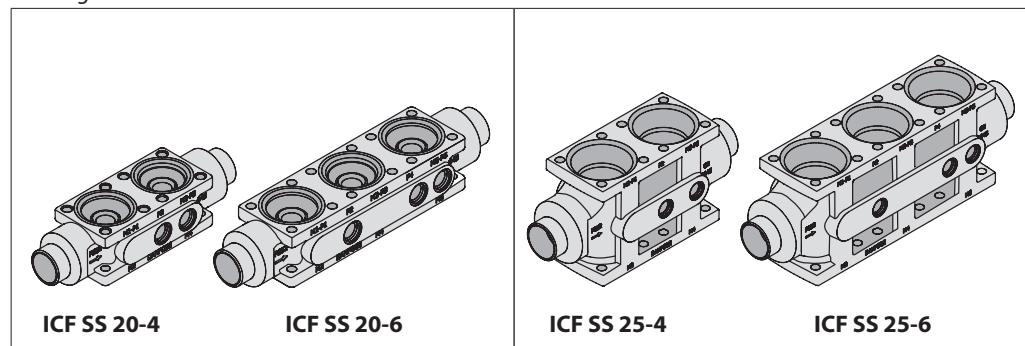

Please refer to the individual function module data.

### Design

The main components of the ICF SS valve station are:

- A housing
- A maximum of four or six function modules

*Housing*

### Function modules

**Each housing accommodates a maximum of four or six function modules, of the following types:**

- Stop valve module
- Manual regulating valve module
- Filter module
- Solenoid valve module
- Electronic expansion valve module
- Manual opening module
- Check valve module
- Stop/check valve module
- Motor valve module
- External welding connection module
- Blank top cover

*Optional:*

The housings are supplied with a predefined number of side ports for the following options:

- Sight glass
- Temperature or pressure sensor
- Pressure gauge
- Side exit for drain or bypass.

The design allows maximum capacity and minimum pressure drop, using advanced technology and double seats – offering higher capacity than conventional systems using individual valves and components.

The ICF SS valve station is multifunctional.

ICF SS valve station offers compact dimensions and shortened installation time due to the reduced number of direct welded connections.

Supplied as a complete assembly, it is leak tested at high pressure and its functions are tested under factory controlled conditions.

*Connections*

- D: Butt weld, DIN (EN 10220)

*Approvals*

The ICF SS concept is designed to fulfil global refrigeration requirements.

For specific approval information, please contact Danfoss.

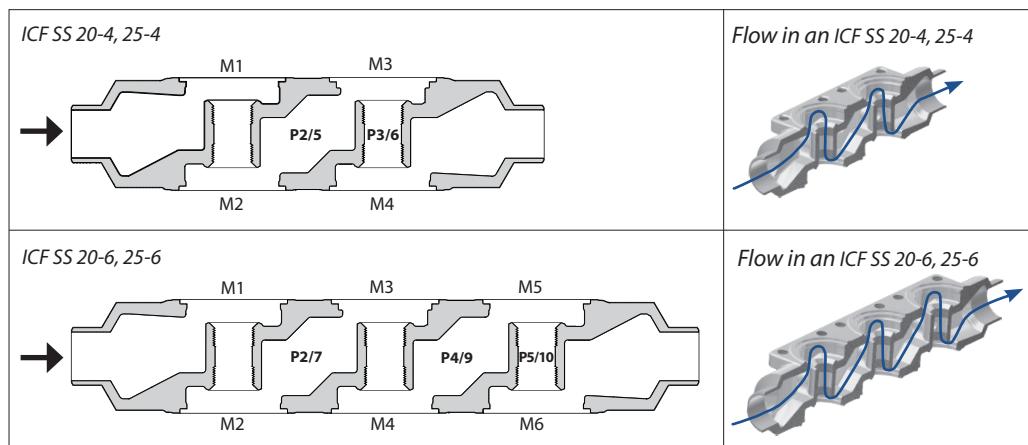

*Housing and function module material*  
Stainless steel

**When using TIG/MIG/SMAW welding technology, it is possible to install the ICF SS valve station without prior removal of the function modules from the housing. If using other welding methods the modules must be removed during welding.**

Please consult the product instruction for more details.

**Code number selection**

To determine the correct ICF SS valve station follow steps 1 through 5.

**Step 1 Determine application and function requirements:**

- Line: Pumped liquid, Liquid Injection, Hot gas defrost, Liquid DX etc.
- Control: On/off solenoid valve, motorised valve
- Defrost: Electric or hot gas

From the above determine the application reference number (see pages 14 and 17):

**Step 2 Selection criteria - Please use Coolselector®2**

Download the software from:

<http://refrigerationandairconditioning.danfoss.com/support-center/apps-and-software/coolselector/>

- Refrigerant
- Capacity
- Temperature
- Circulation rate

From the above determine the valve station required, e.g.: ICF SS 20 complete with ICM SS 20-C

**Step 3 Establish connection sizes and type**

- DIN butt-weld
- 20 (3/4 in.), 25 (1 in.), 32 (1 1/4 in.) or 40 (1 1/2 in.)

**Step 4 Establish code number**

(see pages 18 to 20)

### Applications

To facilitate selection of the right ICF SS valve station Danfoss has predefined and grouped a large number of code numbers matching common applications:

Application #		Sequence of functions					
<b>Liquid feed</b>							
1	Liquid feed (No hotgas defrost)	Stop	Filter	Solenoid	Man Open	Regul-	Stop
2	Liquid feed	Stop	Filter	Solenoid	Man Open	Regul-	Stop/Check
3	Liquid feed	Stop	Filter	Solenoid	Check	Regul-	Stop
10	Liquid feed (No hotgas defrost)	Stop	Filter	Solenoid	Regul-		
15	Liquid feed with external connection	Stop	Filter	Solenoid	Check	Welding	Regul-

### Liquid injection

5	Liquid injection (expansion)	Stop	Filter	Solenoid	Man Open	Motor	Stop
14	Liquid injection (expansion)	Stop	Filter	Motor	Stop		

### Hot gas defrost

9	Hot gas defrost	Stop	Filter	Solenoid	Stop		
---	-----------------	------	--------	----------	------	--	--

### Miscellaneous

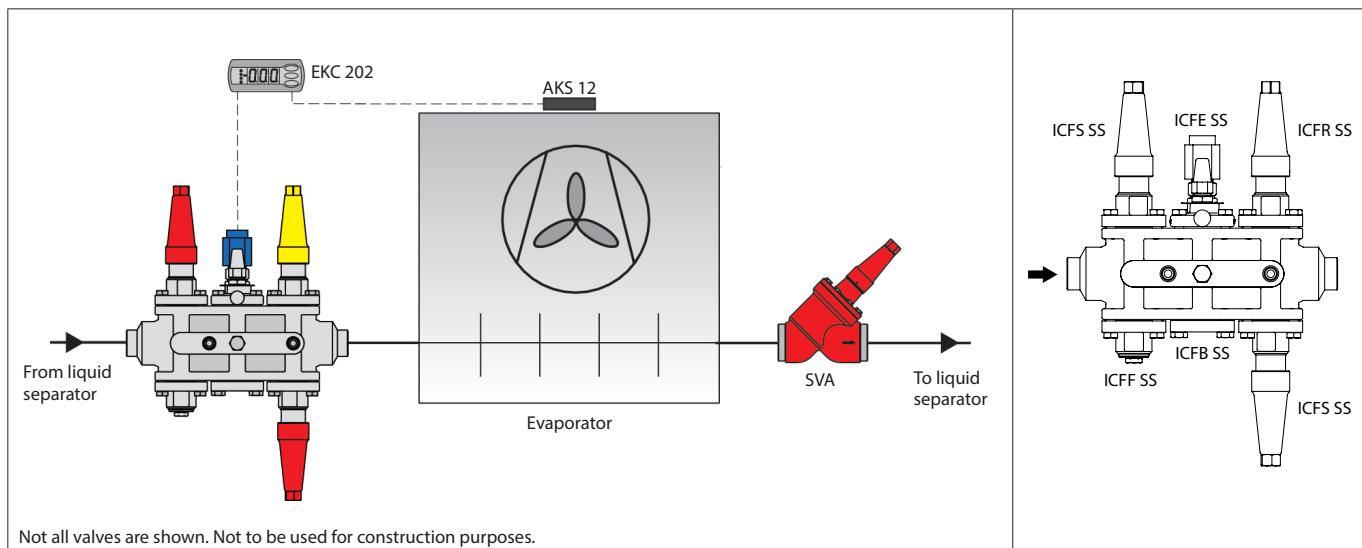

90	Multipurpose configurations						
----	-----------------------------	--	--	--	--	--	--

For specific identification of the different codes and flow capacity ( $K_v$ ) please refer to ordering section.

#### Example of application:

##### Liquid feed line

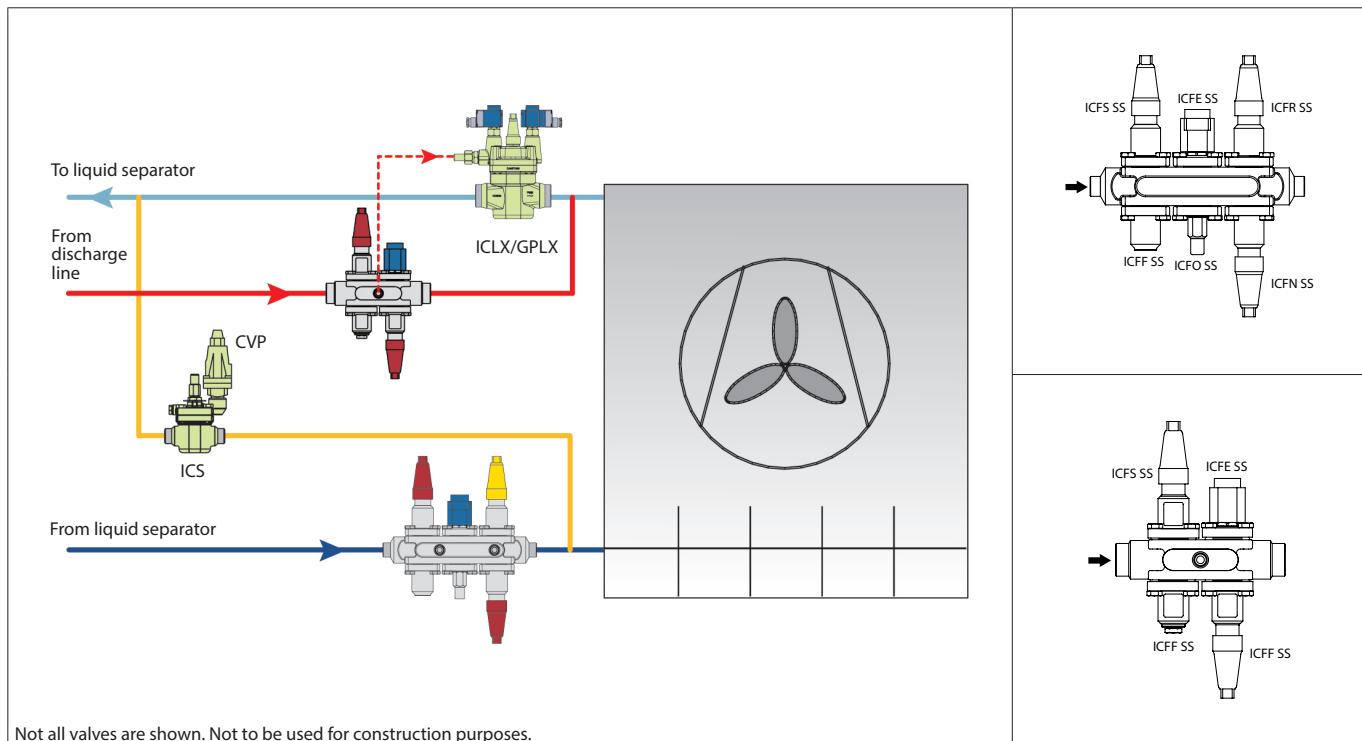

A valve combination for a flooded evaporator operating on/off from a thermostat and with electric defrost is required. Manual override of the solenoid valve is requested. Common ICF SS configurations for this kind of application is shown here:

### Ordering ICF SS valve station

Below Nomenclature show the generic configuration and application by identification of housing size, type and application group.

This designation is often used for discussion on possible solutions and will be the final identification on the valve label (see label example)

For ordering, connection size and type must be chosen to get the final identification. **The final identification is done by code number only** (see next pages)

ICAD and coils are not included and must be ordered separately.

**Please Note:**

When used in systems with CO<sub>2</sub>, the o-rings on the ICM module can swell (grow). At service, it is therefore recommended to install new o-rings, before the ICM function module is re-installed in the ICF SS valve body. ICAD and coils are not included and must be ordered separately.

**ICF SS with six modules**

Function Module Type	Can be installed in these locations					
	M1	M2	M3	M4	M5	M6
ICFS SS Stop valve module	M1		M3	M4	M5	M6
ICFR SS Manual regulating valve module	M1	M2	M3	M4	M5	M6
ICFF SS Filter (strainer) module		M2		M4		M6
ICFE SS Solenoid valve module			M3			
ICFC SS Check valve module				M4		M6
ICFN SS Stop/check valve module				M4		M6
ICM SS Motor valve module	M1		M3		M5	
ICFB SS Blank top cover	M1	M2	M3	M4	M5	M6
ICFA SS Electronic expansion valve module (for ICF SS 20 only)	M1		M3		M5	
ICFE SS 20H Solenoid valve module (for ICF SS 20 only)	M1		M3		M5	
ICFO SS Manual opening module				M4		
ICFW SS Welding module	M1	M2	M3	M4	M5	M6

Module locations are indicated by M1, M2, M3, M4, M5 and M6. With respect to refrigerant flow, M1 is closest to inlet.
