

Data sheet

# Desuperheating valve

## Type TEAT

### Refrigerant injection into the suction line

TEAT valves are used to inject refrigerant into the suction line of the refrigeration system to reduce the high discharge temperatures that can occur when the system operates with highly superheated suction vapour.

This applies when, for example:

- a compressor runs either with low suction pressure or with high condensing temperature.
- a compressor runs with both low suction pressure and high condensing temperature. This applies especially to systems with R 22.
- a compressor receives highly superheated suction vapour.
- a compressor runs with capacity regulation by hot gas bypass.

### Two-stage refrigeration plant

TEAT valves are also used in two-stage refrigeration plant to control liquid injection into the intercooler. The bulb is installed on the discharge line from the high-pressure compressor. The theoretically obtainable discharge temperature for given operating conditions can be found in the h, log p diagram for the refrigerant concerned.

### Temperature regulation of the medium

TEAT valves have a further application: the temperature regulation of the medium, e.g. the temperature of the oil in a screw compressor.

### Materials

Valve housing made of GGG40.3

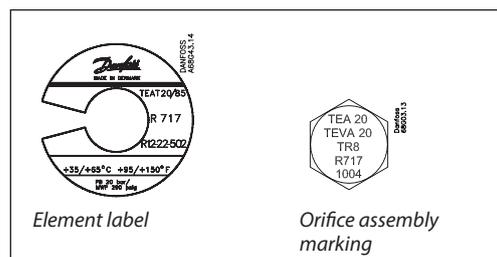

Gaskets are non asbestos.

### Technical data

- Refrigerants  
Applicable to HCFC, non flammable HFC and R717 (Ammonia).
- Regulation ranges  
See ordering table.
- P band  
20°C
- Capillary tube length  
5 m
- Max. bulb temperature  
150°C

- Max. working pressure  
PS = 20 bar
- Max. test pressure  
p' = 30 bar
- Classification: DNV, CRN, BV, EAC etc.  
To get an updated list of certification on the products please contact your local Danfoss Sales Company.

### Identification

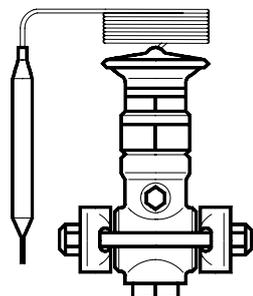

### The thermostatic element

has a label giving valve type, temperature range and max. test pressure.

### The orifice assembly

is common to TEAT, TEA and TEVA. The rated capacity, e.g. 8 TR (= 28 kW) for the refrigerant ammonia is given on the orifice assembly.

The orifice assembly can be used for both ammonia and fluorinated refrigerants.

1) This valve size must be ordered as a complete valve + a separate orifice assemble in the required size.  
 Example: TEAT 20-3 must be ordered as **068G6125 + 068G2052**.  
 The orifice in the complete TEAT 20-2 valve must then be changed with the separate orifice assemble.

Separate filter with gaskets, staybolts and nuts  
 for TEAT 20, code no. **006-0042**  
 for TEAT 85, code no. **006-0048**.

Stainless steel bulb pocket, gasket, and union nut,  
 code no. **993N3615**, for screwing into G ½ socket  
 welded to tube or tank.

**Rated capacity in kW**

Type and rated capacity (TR)	Rated capacity in kW <sup>1)</sup> at Δp = 8 bar					
	R717 (NH <sub>3</sub> )	R22	R134a	R404A	R12	R502
TEAT 20-1	3.3	0.8	0.7	0.6	0.5	0.6
TEAT 20-2	6.4	1.5	1.2	1.1	0.9	1.1
TEAT 20-3	9.7	2.3	1.7	1.6	1.3	1.6
TEAT 20-5	16.0	3.6	3.0	2.9	2.3	2.7
TEAT 20-8	25.6	6.2	4.6	4.4	3.5	4.4
TEAT 20-12	38.4	9.2	6.9	6.7	5.3	6.5
TEAT 20-20	64.0	15.4	13.1	12.6	10.0	10.8
TEAT 85-33	106	26	19.5	18.8	14.9	18.0
TEAT 85-55	173	42.4	31.8	30.6	24.3	27.4
TEAT 85-85	274	66.3	50.3	48.4	38.4	46.5

1) Rated capacity is valve capacity at +5°C evaporating temperature, and 4K subcooling of the liquid in front of the valve.

2) Note: Subcooling of the liquid in front of the valve is essential for the function of the valve. Lack of subcooling will lead to malfunction of the valve and increased wear on orifice.

Extended capacities in kW

85 - 85	48.8	58.2	66.3	72.1	81.4

<sup>1)</sup> The rated capacity is valve capacity at +5°C evaporating temperature, +32°C condensing temperature and 4K subcooling of the liquid in front of the valve.

Design/  
Function

- 1. Thermostatic element (diaphragm)
- 2. Orifice assembly
- 3. Valve body
- 4. Setting spindle
- 11. Intermediate section
- 12. Bulb

Temperature variations in the discharge pipe where the bulb is placed act on the thermal charge in the bulb (12). This changes the pressure in the thermostatic element (1) and thus gives modulating liquid injection.

If leakage in the thermostatic element does occur, it will not result in refrigerant loss.

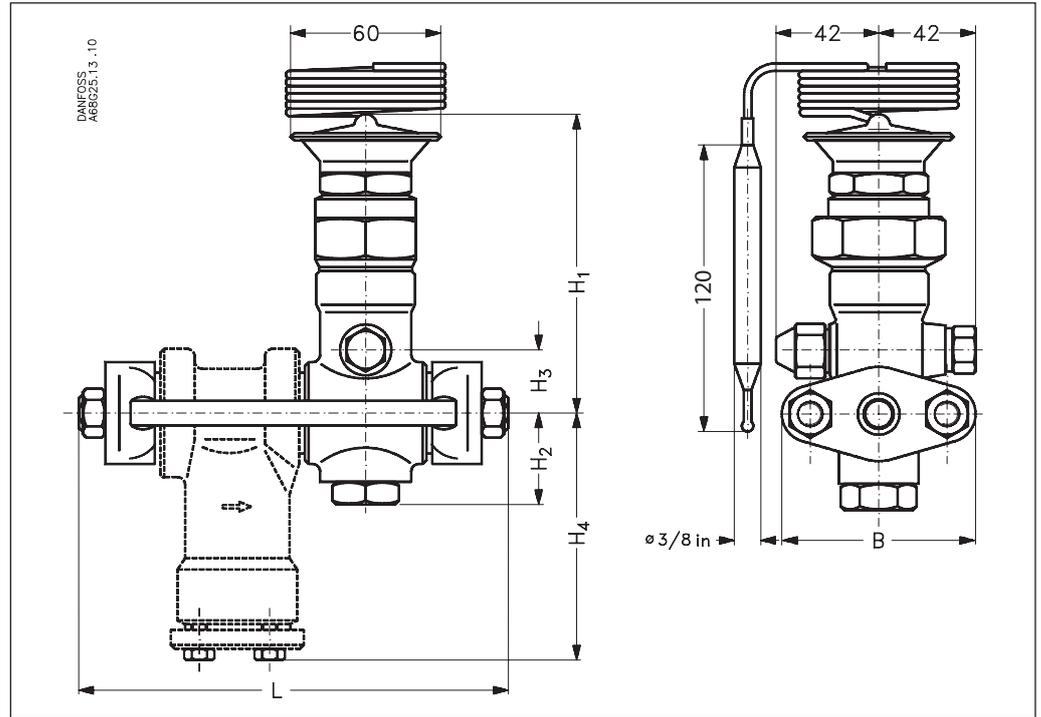

The thermostatic element is screwed to the intermediate section (11) of the valve. A bellow on the intermediate section means that the suction pressure cannot influence the valve setting.

The movement of the setting spindle (4) is transferred through a gearwheel mechanism.

The orifice assembly (2) is identical to that of TEA thermostatic expansion valves.

**Note:** The TEAT is not able to close completely tight, so a solenoid valve is needed to shut off liquid supply, when the system stops.

**Dimensions and weights**

Type	H <sub>1</sub> mm	H <sub>2</sub> mm	H <sub>3</sub> mm	H <sub>4</sub> mm	L		B mm	Weight	
					Excl. strainer mm	Incl. strainer mm		Excl. strainer kg	Incl. strainer kg
